Información general / *General information*

Para una mejor comprensión de los temas y de los datos presentes en el catálogo, proponemos una simbología acompañada por la información necesaria para una selección correcta de los motorreductores y variadores.

Information in this manual is provided with symbols in order to understand the subject matter and data. These symbols are intended to aid the user in selecting the right gearmotors.

Velocidad de entrada / *Input speed*

n_1 [rpm]

Es la velocidad en la entrada del reductor y está relacionada con el tipo de motor seleccionado.

Cuando se requieran otras velocidades, contactar con nuestro servicio técnico.

This is the input speed at the gearbox related to the type of drive unit selected.

When different speeds are required, contact our Technical Service.

Relación de reducción / *Gear ratio*

i

Es una magnitud adimensional y está relacionada con el número de dientes de los engranajes internos del reductor. En los reductores sinfín corona se obtiene dividiendo el número de dientes de la corona entre el número de roscas del tornillo sinfín. Con los datos del catálogo se puede obtener con la siguiente fórmula:

This value is strictly related to the size and number of teeth gears inside the gearbox.
This value is obtained in wormgearboxes by dividing the number of wheel teeth by the number of starts (Z) of the worm.
From the data given in the catalogue, the value can be calculated using the following formula:

$$i = \frac{n_1}{n_2}$$

Velocidad de salida / *Output speed*

n_2 [rpm]

Es la velocidad resultante en el eje de salida del reductor y se obtiene de la fórmula anterior:

This is the gearbox output speed calculated using the formula given above:

$$n_2 = \frac{n_1}{i}$$

En los motovariadores esto es el resultado de cálculos más complejos, para esto en el catálogo encontrara todos los valores de n2 en función de la velocidad en entrada y del campo de variación mínimo y máximo.

In mechanical variators this value is more complicated to calculate. In fact the application data need to be known in order to calculate this value. All the n2 values are given in this catalogue according to the input speed and allowable range.

Par requerido / *Requested torque*

Mr_2 [lb-inch]

Es el par requerido para la aplicación y es necesario para selecionar la motorización. Puede ser comunicado por el usuario o calculado a través de los datos de la aplicación (si se conocen).

This is the torque needed for the application and must be known when selecting a drive system. It can either be provided by the user or calculated according to the application data (if provided).

Par nominal — Mn_2 [lb-inch] — *Nominal torque*

Es el par transmisible a la salida del reductor, en base a la velocidad en entrada n1 y a la relación de reducción i.
Se calcula considerando un servicio con una carga continua constante, que corresponde a un factor de servicio igual a 1. Este valor no aparece en el catálogo, pero se puede calcular aproximadamente mediante la relación siguiente entre M2 (par de salida) y SF (factor de servicio):

This is the output torque that can be transmitted by the gearbox according to input speed n_1 and gear ratio i. It is calculated based on service with a continuous steady load corresponding to a service factor equal to 1. This value is not given in the catalogue but can be calculated approximately with the following formula between M_2 (output torque) and sf (service factor):

$$Mn_2 = M_2 \cdot sf$$

Par transmitido — M_2 [lb-inch] — *Output torque*

Es el par transmitido en la salida del reductor.
Depende de la potencia P1 del motor instalado, de las revoluciones de salida n2 y del rendimiento dinámico Rd.
Se puede calcular mediante la relación:

This is the gearbox's output torque. It is strictly related to power P_1 of the motor installed, output rpm n_2 and dynamic efficiency Rd. It can be calculated with the following formula:

$$M_2 = \frac{63025 \cdot P_1 \cdot Rd}{n_2}$$

o: *or:*

$$M_2 = \frac{63025 \cdot P_2}{n_2}$$

dónde: *where:*

$$P_2 = P_2 \cdot R$$

Rendimiento — Rd — *Efficiency*

Los cálculos de rendimiento se basan en el rendimiento dinámico Rd de los reductores.

Efficiency is calculated based on dynamic efficiency Rd of the gearboxes.

En los reductores de engranajes el rendimiento medio es 94%.

On helical gearboxes the average efficency is 94%.

Potencia de entrada — P1 [hp] — *Input power*

Es la potencia del motor aplicada en la entrada al reductor y se refiere a la velocidad n1.
Se puede calcular de la siguiente manera:

This is the power applied by the motor at the gearbox input in reference to speed n1.
It can be calculated with the following formula:

$$P_1 = \frac{M_2 \cdot n_2}{63025 \cdot Rd}$$

Factor de servicio — sf — *Service factor*

Es un magnitud adimensional que indica el sobredimensionamiento aplicable a una motorización para garantizar la resistencia a los choques y la durabilidad necesaria.
Las tablas del catálogo ofrecen una amplia selección de motorizaciones con factores de servicio diferentes que pueden satisfacer a la mayoría de las aplicaciones.
Para una correcta interpretación de los valores del factor de servicio sf en las selecciones propuestas, encontraran en las tablas siguientes los valores aproximados de las clases de carga A, B, C, de las horas de funcionamiento cotidiano y del número de arranques por hora.
Una vez definida la clase de carga de la aplicación, se busca en la tabla el correspondiente valor de sf para elegir la unidad más adecuada.

This value indicates how a certain drive system is to be over-sized in order to assure the requested service and stand up to shocks.
The tables given in the catalogue offer a wide range of drive systems with different service factors able to satisfy most types of applications. To correctly understand service factor values sf given for each item, approximate values for load classes A, B and C along with the number of hours of daily operation h/d and number of start-ups/hours need to be known.
Once the load class required for the application has been determined, locate corresponding value sf to be used when selecting the most suitable drive system.

Tipo de carga	**A** - Carga uniforme	fa ≤ 0.3
	B - Carga con choques moderados	fa ≤ 3
	C - Carga con choques fuertes	fa ≤ 10

Type of load	***A** - Uniform*	*fa ≤ 0.3*
	***B** - Moderate shocks*	*fa ≤ 3*
	***C** - Heavy shocks*	*fa ≤ 10*

$$fa = \frac{Je}{Jm}$$

- Je (kgm^2) momento de inercia de las masas externas, referido al eje del motor.
- Jm (kgm^2) momento de inercia del motor.
  Para valores > 10 se recomienda contactar con el Servicio Técnico.

$$fa = \frac{Je}{Jm}$$

- *Je (kgm^2) moment of reduced external inertia at the drive-shaft*
- *Jm (kgm^2) moment of inertia of motor.*
  If fa > 10 call our Technical Service.

A — Clase de carga / *Load class*
Carga uniforme / *Uniform load*

h/d	sf — n. arranques/hora / n. start-up/hour								
	2	**4**	**8**	**16**	**32**	**63**	**125**	**250**	**500**
4	0.8	0.8	0.9	0.9	1.0	1.1	1.1	1.2	1.2
8	1.0	1.0	1.1	1.1	1.3	1.3	1.3	1.3	1.3
16	1.3	1.3	1.3	1.3	1.5	1.5	1.5	1.5	1.5
24	1.5	1.5	1.5	1.5	1.8	1.8	1.8	1.8	1.8

A - Tornillos de Arquímedes para materiales ligeros, ventiladores, líneas de montaje, cintas transportadoras para materiales ligeros, pequeños agitadores, elevadores, máquinas limpiadoras, máquinas llenadoras, máquinas comprobadoras, cintas trasportadoras.
A - *Screw feeders for light materials, fans, assembly lines, conveyor belts for light materials, small mixers, lifts, cleaning machines, fillers, control machines.*

B — Clase de carga / *Load class*
Carga con choques moderados / *Moderate shock load*

h/d	sf — n. arranques/hora / n. start-up/hour								
	2	**4**	**8**	**16**	**32**	**63**	**125**	**250**	**500**
4	1.0	1.0	1.0	1.0	1.3	1.3	1.3	1.3	1.3
8	1.3	1.3	1.3	1.3	1.5	1.5	1.5	1.5	1.5
16	1.5	1.5	1.5	1.5	1.8	1.8	1.8	1.8	1.8
24	1.8	1.8	1.8	1.8	2.2	2.2	2.2	2.2	2.2

B - Dispositivos de enrollado, alimentadores de las máquinas para la madera, montacargas, equilibradores, roscadoras, agitadores medios y mezcladores, cintas transportadoras para materiales pesados, cabrestantes, puertas corredizas, raspadores de abono, máquinas empaquetadoras, hormigoneras, mecanismos para el movimiento de las grúas, fresadoras, plegadoras, bombas de engranajes.
B - *Winding devices, woodworking machine feeders, goods lifts, balancers, threading machines, medium mixers, conveyor belts for heavy materials, winches, sliding doors, fertilizer scrapers, packing machines, concrete mixers, crane mechanisms, milling cutters, folding machines, gear pumps.*

C — Clase de carga / *Load class*
Carga con choques fuertes / Heavy *shock load*

h/d	sf — n. arranques/hora / n. start-up/hour								
	2	**4**	**8**	**16**	**32**	**63**	**125**	**250**	**500**
4	1.3	1.3	1.3	1.3	1.5	1.5	1.5	1.5	1.5
8	1.5	1.5	1.5	1.5	1.8	1.8	1.8	1.8	1.8
16	1.8	1.8	1.8	1.8	2.2	2.2	2.2	2.2	2.2
24	2.2	2.2	2.2	2.2	2.5	2.5	2.5	2.5	2.5

C - Agitadores para materiales pesados, cizallas, prensas, centrifugadoras, soportes rotativos, cabrestantes y elevadores para materiales pesados, tornos para la rectificación, molinos de piedras, elevadores de cangilones, perforadoras, moledores a percusión, prensas de excéntrica, plegadoras, mesas giratorias, pulidoras, vibradores, cortadoras.
C - *Mixers for heavy materials, shears, presses, centrifuges, rotating supports, winches and lifts for heavy materials, grinding lathes, stone mills, bucket elevators, drilling machines, hammer mills, cam presses, folding machines, turntables, tumbling barrels, vibrators, shredders.*

Ejemplo de aplicación:
Cinta transportadora atribuible a la clase de carga B **(carga con choques moderados)**, previsto para una hora de funcionamiento diaria (h/d) **16** horas y con 8 arranques/hora De la tabla obtenemos: **sf = 1.5**

Application example:
*Conveyor belt assigned to load class B **(moderate shock load)**, to be run **16** hours a day (h/d) with **8** start-ups/hour.*
*The following value is obtained from the table **sf = 1.5***

Factor de servicio clase AGMA — AGMA — *Service class AGMA*

Los números de clases AGMA tienen la misma función del factor de servicio.
Las clases de aplicación son I, II y III siendo la clase III la mas obligada para servicios críticos.
La relación entre el factor de servicio y las clases de aplicacion pueden ser resumidas como sigue:

AGMA class numbers have the same function as the service factor.
The application classes are I, II, III with class III being the most severe service duty.
The relationship between the service factor and classes of application can be summarized as below:

Aplicación clases AGMA *Application class AGMA*	Factor de servicio *Service factor*
I	0.8 - 1.39
II	1.4 - 1.99
III	≥ 2.00

Notas sobre la tabla de FACTOR DE SERVICIO PARA REDUCTORES:
1) La clasificación de los números listados para la aplicación de la industria del papel son consistentes con los mostrados en la información tecnica de la TAPPI (Asociación Técnica de la industria del papel y la pulpa), hoja 0406- 18 1967: factores de servicio para engranajes en servicios pesados en la industria del papel y la pulpa.
2) Solo para transporte anti fricciòn.
3) Un factor de servicio de 1.00 puede ser aplicado a la velocidad base de una súper calandradora que opera sobre caballos de fuerza con un rango de velocidad constante y en el rango de la constante del torque donde la velocidad de la potencia sea mayor que 1.5 a 1. Un número de clase II es aplicable a súper calandradoras que operan en todo el rango de velocidad con par constante o cuando la gama de velocidades de los caballos de fuerza constante es menor de 1.5 a 1.

Notes to GEARMOTOR SERVICE FACTOR table:

1) The class numbers listed for paper mill applications are consistent with those shown in TAPPI (Technical Association of Pulp and Paper Industry) Technical Information Sheet 0406-18 1967, Service Factors for Gears on major Equipment in the Paper and Pulp Industry.
2) Anti-friction bearings only.
3) A Class Number of I may be applied at base speed of a supercalendar operating over a speed range of part-range constant horsepower and part-range constant torque where the constant horsepower speed range is greater than 1.5 to 1. A Class Number of II is applicable to supercalendars operating over the entire speed range at constant torque or where the constant horsepower speed range is less than 1.5 to1.

Carga radial — $R; R_2$ [lb] — *Radial load*

La aplicación en el eje de salida del reductor de piñones, poleas, etc. determina fuerzas radiales que es necesario considerar para evitar excesivo estrés y el riesgo de daños del reductor.
El cálculo de la carga radial externa R que actúa sobre el eje del reductor se puede calcular de la siguiente manera:

Pinions, pulleys, etc applied on the output shaft of the gearboxes create radial forces that must be taken into consideration to avoid excessive stress risking damage to the gearbox itself.

External radial load R that acts on the gearbox shaft can be calculated as follows:

$$R = \frac{2 \cdot M_2 \cdot kr}{d} \leq R_2$$

donde:
d [inch] diámetro primitivo del piñón o polea
kr coeficiente con relación al tipo de transmisión:
kr = 1.4 transmisión por cadena
kr = 1.1 transmisión por cadena
kr = 1.5 - 2.5 polea para correa trapecial

where:
***d** [inch] diameter of the pinion or pulley*
***kr** coefficient in relation to type of transmission:*
***kr = 1.4** sprocket wheel*
***kr = 1.1** gear*
***kr = 1.5 - 2.5** pulley for V belts*

Señalamos que los valores R2 son válidos para cargas aplicadas a la mitad del eje de salida, entonces la comparación debe hacerse en las mismas condiciones.

Keep in mind that values R_2 refer to loads that act on the center-line of the output shaft (considering the shaft protrudes). As a result, the value should be compared under the same conditions.

Carga axial — $A; A_2$ [lb] — *Axial load*

A veces, junto con la carga radial también puede estar presente una fuerza A que actúa axialmente en el eje de salida; en este caso tener en cuenta que la carga axial admisible A2 en el eje es:

At times, along with the radial load, force A may be present that acts axially on the output shaft. In this case, keep in mind allowable axial load A_2 that can be applied on the shaft is:

$$A_2 = R_2 \cdot 0.2$$

Si el valor de la carga axial A en el eje resulta superior a A_2, consultar con nuestro servicio técnico.

If axial load A that acts on the shaft is greater than A_2, contact our Technical Service.

Seleccionando el motorreductor — *Selecting the gearmotors*

Para seleccionar el motorreductor requerido realizar el siguiente procedimiento:

1. Determinar el factor de servicio fs para la aplicación deseada haciendo referencia a los gráficos dados en la página A6. Esto está hecho considerando la clase de carga, la operación horas/días y el número de puesta en marcha/hora.

2. Si la potencia de salida del motor requerido P (Hp) es conocida, ir al punto 3); si el torque de salida requerido M es conocido, determine la salida de del motor P usando las siguientes fórmulas:

To select the required gearmotor, perform the procedure below:

1. *Determine the service factor sf for the desired application by referring to the charts given on page A6. This is to be done by considering the class of load, the operational hours/day and the number of start-ups/ hour.*

2. *If the required motor power output P (Hp) is known, go to item 3); if the required output torque M is known, determine motor output P by using the following formulas:*

$$P = \frac{M \cdot n_2}{63025 \cdot Rd}$$

Motor reductor
Gearmotor

donde Rd es para la eficiencia dinámica (indicada en la página D6) y n2 indica la salida requerida rpm del motorreductor.

where Rd stands for the dynamic efficiency (indicated on page D6) and n_2 indicates the required output rpm of the gearmotor.

Seleccionando el motorreductor

3. Use la gráfica de especificación para buscar la unidad de potencia donde P1 es mayor que o igual a P con una velocidad n2/n2max que se aproxima al valor deseado. Elija una unidad de potencia donde el factor de servicio indicado fs es igual o mayor que la unidad calculada en el punto 1).

Selecting the gearmotors

3. Use the specification chart to search for the power unit where P_1 is greater than or equal to P with a speed n_2/n_{2max} that approximates the desired one. Choose a power unit where the indicated service factor sf is equal to or greater than that calculated at point 1).

P_1 [hp]	n_2 [rpm]	M_2 [lb·in]	sf	AGMA	i		NEMA	R_2 [lb]

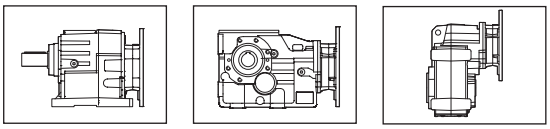
Lubricación

Los reductores de las serie ITH, ITB, y ITS se suministran con lubricante sintético viscosidad 320 de larga duración.

Lubrication

All unit sizes of ITH, ITB, and ITS series are complete with a long life synthetic lubricant, viscosity 320.



ITH **ITB** **ITS**

SHELL	AGIP	KLUBER	CASTROL	ESSO	MOBIL
Shell Omala S4 WE320	Tellium VSF320	Klubersynth GH 6 320	Alphasyn PG320	S320	Mobil Glygoyle HE 320

Las tablas indican la cantidad aproximada de lubricante contenido y/o que se debe verter.

The tables indicates the approximate amount of lubricant held and/or to be put in.

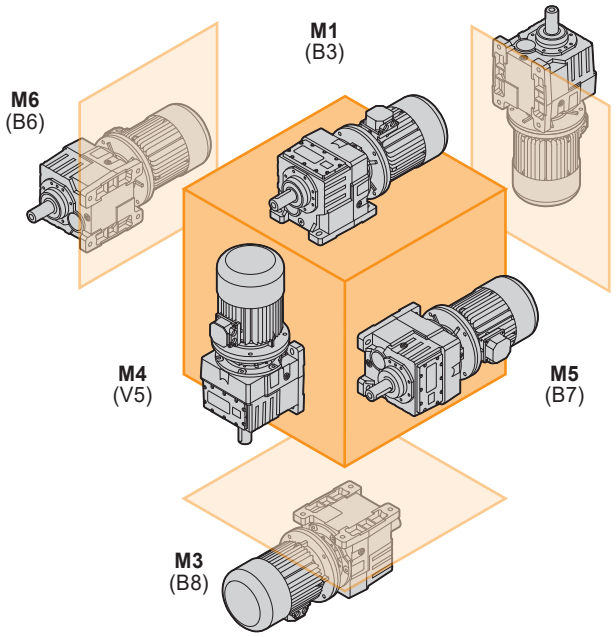
Especifique siempre la posición de montaje deseada al momento de hacer el pedido.

Always specify the desired installation position at the time of order.

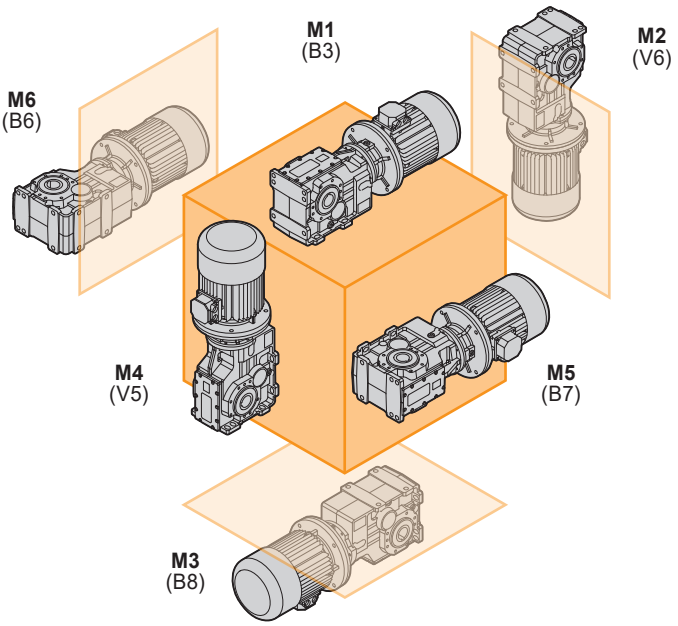
Posición de Montaje

Mounting positions

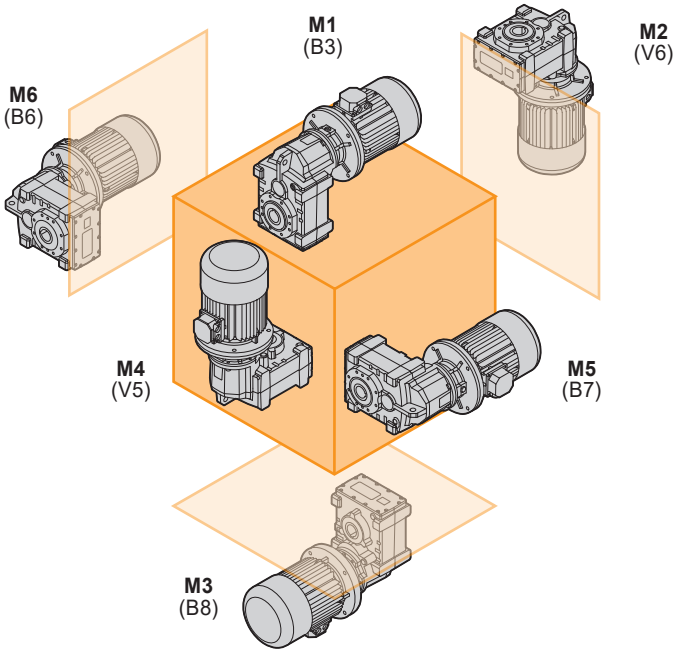
ITH



ITB

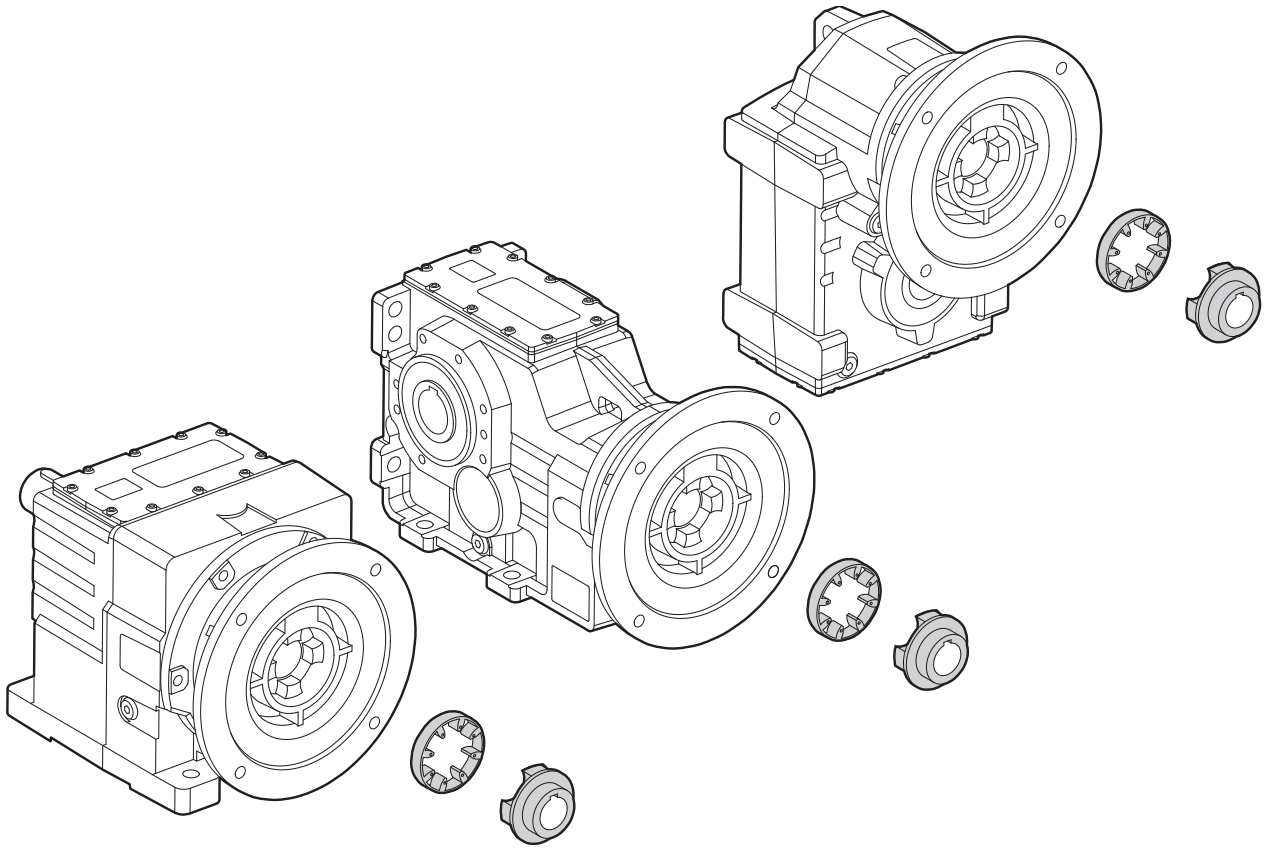


ITS



Acoplamiento flexible

Flexible coupling



La conexión al motor por medio de cople flexible permite los siguientes beneficios:
- Incremento en la rigidez torsional;
- Reducción de vibraciones;
- Amortigua el pico de inercia al arranque del motor;
- Elimina el fenómeno de oxidación entre flecha del motor y cople metálico;
- Reduce la temperatura de operación;
- Fácil desensamble del motor después de largos períodos de operación.

Motor connection by flexible coupling allows the following benefits:

- *Increasing torsional rigidity;*
- *Reducing vibrations;*
- *Cushioning motor start up jerks;*
- *Eliminates fretting corrosion phenomenon between motor sleeve and electric motor shaft;*
- *Lowering operating temperature;*
- *Easy disassembly of the motor after long periods of use;*

Temperatura de servicio / *Operating temperature*

La temperatura ambiente afecta las especificaciones de los reductores.

The environmental temperature affects specifications of gearboxes.

Gama de temperatura estándar / *Standard temperature range*

ITH	-15°C / +50°C	+5°F / +122°F
ITB	-15°C / +50°C	+5°F / +122°F
ITS	-15°C / +50°C	+5°F / +122°F

Gamas de temperaturas especiales / *Special temperature range*

	<-15°C / <+5°F	**>+50°C / >+122°F**
ITH	reducir la carga radial en la salida al 50% *halve the output radial loads*	Usar sello de Viton (FPM) *use Viton (FPM) oil seals* *Usar lubricante para alta temperatura* *use high temperature lubricant*
ITB	reducir la carga radial en la salida al 50% *halve the output radial loads*	
ITS	reducir la carga radial en la salida al 50% *halve the output radial loads*	

Si la temperatura es <0°C/F:
- verificar que el motor sea idóneo para trabajar a bajas temperaturas;
- verificar que el motor pueda proveer mayor par de arranque a causa del aumento de la viscosidad del lubricante;
- para una lubricación óptima accionar sin carga algunos minutos;

For temperature <0°C/F refer to the following notes:
- *check if the motor is suitable for low temperature;*
- *due to the high viscosity of the lubricant, check if the motor can supply high starting torque;*
- *let the group run for a few minutes without load to guarantee good lubrication;*

Instalación y controles

Al momento de la instalación del equipo reductor es recomendable verificar que:

- Los datos en la placa correspondan al producto pedido;
- Las superificies de acoplamiento y los ejes sean limpios y sin abolladuras;
- Las supeficies donde se instala el reductor (o motovariador) sean planas y bastante rígidas;
- El eje de la máquina operadora y del reductor sean correctamente alineados;
- Se hayan instalados los limitadores de par si hay probabilidad de golpes o bloqueo durante el funcionamiento;
- Las partes rotativas de las maquinas lleven las protecciones de seguridad necesarias;
- Para instalaciones al exterior, sean presentes adecuadas protecciones contra la exposición a los agentes atmosféricos;
- El ambiente de trabajo no sea expuesto a agentes corrosivos (a menos que no haya sido comunicado en el pedido, a fin de preparar el reductor o el motovariador para este uso);
- Los piñones y poleas sean correctamente ensamblados en el eje de salida o de entrada del reductor, para evitar cargas radiales y/o axiales superiores a las admitidas;
- Todos los acoplamientos sean tratados con adecuado producto anticorrosivo para evitar oxidaciones;
- Todos los tornillo de sujeción estén bien apretados;
- Verificar la cantidad de lubricante acorde la posición de montaje en todos los reductores.

Installation and inspection

While installing the gearbox, always make sure that:

- *the specifications stamped on the rating plate match those indicated for the unit actually ordered;*
- *the mating surfaces and the shafts are thoroughly clean and free of dents;*
- *the surfaces where the gearbox are to be mounted on are flat and strong enough;*
- *the machine drive shaft and the gearbox shaft are perfectly aligned;*
- *the required torque limiters have been installed if the machine is likely to produce shocks or blockages during operation;*
- *the rotary parts have been provided with the required safety guards;*
- *adequate weatherproof covering has been provided if the machine is to be installed outdoor;*
- *the working environment is not exposed to corrosive agents (unless this has been indicated while placing the order so that the gearbox can be adequately set up);*
- *the pinions or pulleys on the gearbox input/output shafts are properly fitted in order not to produce radial and/or axial loads that exceed the maximum allowable limits;*
- *all the couplings have been treated with adequate rust preventative in order to avoid oxidation provoked by contact;*
- *all the mounting screws have been securely tightened;*
- *check the lubricant quantity depending on the mounting position on all gearboxes.*

Aplicaciones críticas

En estos casos consultar con nuestro Servicio Técnico

- uso como multiplicador;
- uso como montacargas;
- uso en posiciones no contempladas en el catálogo;
- uso en ambientes con presión diferente de la atmosférica;
- uso en ambiente con temperaturas <-25°C/-13°F or >+50°C/+122°F

Critical applications

In these cases please contact the Technical Service

- *used to increase speed;*
- *used as a hoist;*
- *used in mounting positions not shown in the catalogue;*
- *use in environment pressure other than atmospheric pressure;*
- *use in places with temperature <-25°C/-13°F or > +50°C / +122°F*

Características técnicas

Technical features

El motorreductor ITH está diseñado para aplicaciones de uso rudo. Su carcaza fundida en una sola pieza y su diseño modular con distintos accesorios en la entrada y en la salida, incrementan su flexibilidad de uso en múltiples aplicaciones.

The ITH gearmotors are intended for heavy duty applications. The robust one pieces casing of the main housing and the modular design of input and output sets increase application fexibility.

Características principales de la serie ITH:

- Carcaza en fierro fundido;
- Elevada modularidad;
- Lubricación con aceite sintético;
- Acoplamiento a motor con cople flexible;
- Acabado en pintura epóxica RAL 7016.

The main features of ITH range are:

- *Robust cast iron housings;*
- *High degree of modularity;*
- *Lubrication with synthetic oil;*
- *Coupled to motor with flexible coupling.*
- *Epoxy powder coating RAL 7016.*

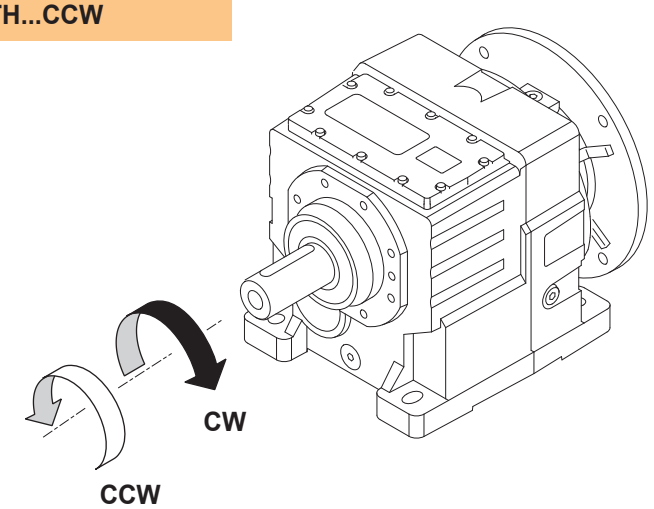
Favor de contactar al servicio técnico TRANSTECNO.

Note: ITHIS133 ratios 191,39 – 209,48 – 230,85 and ITHIS143 ratios 193,96 – 209,65 – 229,46 – 252,87 available upon request.
Please contact TRANSTECNO technical service.

Accesorios / *Accessories*

Dispositivo anti-retorno / *Backstop device*

ITH...CW
ITH...CCW



El dispositivo anti-retorno permite que la flecha de salida gire en un solo sentido.
Antes de utilizarlo, especifique la rotación deseada como se muestra en la figura.

The backstop device allows the output shaft to rotate in just one direction. Before using it, please specify output shaft rotation direction as shown in the figure.

TRANSTECNO®
the modular gearmotor

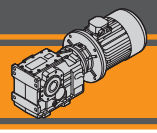
ITB

ITB Iron

60Hz

Motoreductores de ejes ortogonales
Helical bevel gearmotors

Nema



ENERGY SAVING

Características técnicas

El motorreductor ITB está diseñado para aplicaciones de uso rudo. Su carcaza fundida en una sola pieza y su diseño modular con distintos accesorios en la entrada y en la salida, incrementan su flexibilidad de uso en múltiples aplicaciones.

Características principales de la serie ITB:

- Carcaza en fierro fundido;
- Elevada modularidad;
- Lubricación con aceite sintético;
- Acoplamiento a motor con cople flexible;
- Acabado en pintura epóxica RAL 7016.

Technical features

The ITB gearmotors are intended for heavy duty applications. The robust one pieces casing of the main housing and the modular design of input and output sets increase application fexibility.

The main features of ITB range are:

- *Robust cast iron housings;*
- *High degree of modularity;*
- *Lubrication with synthetic oil;*
- *Coupled to motor with flexible coupling;*
- *Epoxy powder coating RAL 7016.*

	850	1180	876	-	-	-

Las cargas radiales máximas aplicables están indicadas en las tablas previas.
Cuando la carga radial no se aplica en el punto medio del eje, es necesario calcular la carga efectiva a través la siguiente fórmula:

The radial loads maximum input applicable are indicated in the previous tables.
When the resulting radial load is not applied on the centre line of the shaft it is necessary to calculate the effective load with the following formula:

	ITB 423	ITB 433	ITB 443
a	5.472		6.181
b	4.330		4.645

$$R_c = \frac{R_1 \cdot a}{(b+x)} \leq R_1$$

$$R \leq R_c$$

a, b = valores dados en la tabla
a, b = values given in the table

Carga radial en la salida — *Output radial loads*

Las cargas radiales máximas aplicables en la salida están indicadas en la siguiente tabla
Cuando la carga radial no se aplica en el punto medio del eje, es necesario calcular la carga efectiva a través la siguiente fórmula:

The radial loads maximum output applicable are indicated in the technical data table.
When the resulting radial load is not applied on the centre line of the shaft it is necessary to calculate the effective load with the following formula:

	ITB 423	ITB 433	ITB 443
a	7.165	8.582	9.921
b	5.590	6.614	7.559
R_{2MAX}	4.158	5.170	6.969

$$R_c = \frac{R_2 \cdot a}{(b+x)} \leq R_{2MAX}$$

$$R \leq R_c$$

a, b = valores dados en la tabla
a, b = values given in the table

Características técnicas

El motorreductor ITS está diseñado para aplicaciones de uso rudo. Su carcaza fundida en una sola pieza y su diseño modular con distintos accesorios en la entrada y en la salida, incrementan su flexibilidad de uso en múltiples aplicaciones.

Características principales de la serie ITH:

- Carcaza en fierro fundido;
- Elevada modularidad;
- Lubricación con aceite sintético;
- Acoplamiento a motor con cople flexible;
- Acabado en pintura epóxica RAL 7016.

Technical features

The ITS gearmotors are intended for heavy duty applications. The robust one pieces casing of the main housing and the modular design of input and output sets increase application fexibility.

The main features of ITS range are:

- *Robust cast iron housings*
- *High degree of modularity*
- *Lubrication with synthetic oil*
- *Coupled to motor with flexible coupling*
- *Epoxy powder coating RAL 7016.*

Las cargas radiales máximas aplicables están indicadas en las tablas.
Cuando la carga radial no se aplica en el punto medio del eje, es necesario calcular la carga efectiva a través la siguiente fórmula:

The radial loads maximum output applicable are indicated in the previous tables.
When the resulting radial load is not applied on the centre line of the shaft it is necessary to calculate the effective load with the following formula:

	ITS922	ITS923	ITS932	ITS933	ITS942	ITS943
a	5.472				6.181	5.472
b	4.330				4.645	4.330

$$R_c = \frac{R_1 \cdot a}{(b+x)} \leq R_1$$

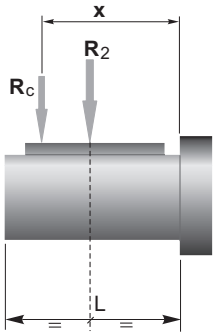
$$R \leq R_c$$

a, b = valores dados en la tabla
a, b = values given in the table

Carga radial en la salida — *Output radial loads*

Las cargas radiales máximas aplicables en la salida están indicadas en la siguiente tabla.
Cuando la carga radial no se aplica en el punto medio del eje, es necesario calcular la carga efectiva a través la siguiente fórmula:

The radial loads maximum output applicable are indicated in the technical data table.
When the resulting radial load is not applied on the centre line of the shaft it is necessary to calculate the effective load with the following formula:



ITS	922 U... 923 U...	922 P... 923 P...	932 U... 933 U...	932 P... 933 P...	942 U... 943 U...	942 P... 943 P...

$$R \leq R_c$$

a, b = valores dados en la tabla
a, b = values given in the table

La versión U se suministra con rodamientos esféricos en la salida.
La versión P se suministra con rodamientos de rodillos en la salida.

U version has ball bearings on the output side.
P version uses taper roller bearings.
It's possible to have taper roller bearings for U version upon request.
