Caratteristiche tecniche

Technical characteristics

I motori della serie TS sono chiusi e dotati di ventola di raffreddamento.

La serie comprende motori ad induzione trifase 230/400 Vca a 50 Hz e 275/480 Vca a 60 Hz, 2-4-6 poli, per potenze da 0.06 kW fino a 15 kW e 400/690V a 18.5 kW.

Silenziosi e dinamicamente ben bilanciati uniscono qualità robustezza e convenienza.

Efficienza livelli IE1, IE2 e IE3.

La serie è costruita in alluminio ed è disponibile in configurazione B5, B14 e B3.

Altre caratteristiche standard dei motori TS sono:

- Isolamento termico di classe F
- Grado di protezione IP55 standard
- Sonda bimetallica PTO per protezione da sovratemperatura (solo IE2 e IE3)
- Rumorosità e vibrazioni contenute
- Temperatura ambiente: -20 °C ÷ +40 °C.
- Per uso industriale (industria leggera e pesante) e commerciale.
- Separatore di fase, per uso con convertitore di frequenza (campo frequenza consigliato 30-80Hz, contattare Transtecno per un diverso campo di lavoro)
- Tolleranza sulla tensione di alimentazione: ±10%
- B14 a 8 fori

TS series motors are closed and fan cooled.

The series includes induction 3-phase 2-4-6 poles motors 230/400 Vac at 50 Hz and 275/480 Vac at 60 Hz, it covers power sizes from 0.06 kW up to 18.5 kW. 18.5 kW standard is 400/690V power supply

These motors run quietly and are dynamically well balanced; they match quality, strength and cheapness.

IE1, IE2 and IE3 efficiency levels.

The series is made in aluminum frame and is available with B5, B14 and B3.

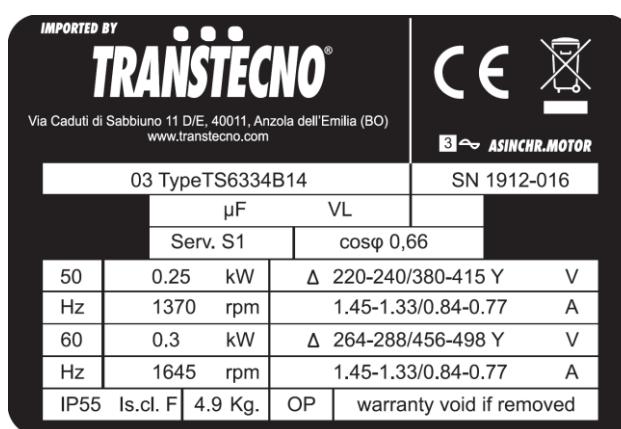

Other TS standard features are:

- Class F thermal insulation
- IP55 enclosure protection
- PTO thermostat for overheating protection (IE2 and IE3 only)
- Low noise and vibrations
- Ambient temperature: -20 °C ÷ +40 °C.
- Heavy and light industrial applications suitable and commercial ones.
- Interwindings insulators, for use with frequency converter (recommended frequency range 30-80Hz, pls, contact Transtecno for a different frequency range)
- Supply voltage tolerance: ±10%
- B14: 8 holes

Simbologia e formule

Symbols and formulas

P_n	[kW]	Potenza nominale	Rated power
I_n	[A]	Corrente nominale (a 400V)	Rated current (at 400V)
M_n	[Nm]	Coppia nominale	Rated torque
n_n	[rpm]	Velocità nominale	Rated speed
LR	[dB]	Livello di rumorosità	Noise Level
M_s / M_n		Rapporto coppia spunto / coppia nominale	Ratio start torque / rated torque
M_k / M_n		Rapporto coppia massima / coppia nominale	Ratio max torque / rated torque
M_{sel} / M_n		Rapporto coppia di sella (minima) / coppia nominale	Ratio saddle torque / rated torque
I_s / I_n		Rapporto corrente di spunto / corrente nominale	Ratio start current / rated current
$\cos\phi$		Fattore di potenza al carico nominale	Power factor at rated torque load
η		Rendimento al carico nominale	Efficiency at rated torque load
<i>Potenza/Power</i>	[HP]	Potenza [kW] x 1.34 circa / Power [kW] x 1.34 (about)	
<i>Potenza resa P_r/P_n output power</i>	[kW]	Potenza assorbita x ρ_1 / Absorbed powerx ρ_1	
<i>Pot. Assorbita/Absorbed power</i>	$\sqrt{3} \times P / 1000$	(monofase/singlephase)	
I_n (230 V)		$\sqrt{3} \times I \times P / 1000$ (trifase/ 3-phase)	
		In (400 V) x $\sqrt{3}$

Informazioni generali

General information

Caratteristiche generali

General characteristics

- Ventilazione: ventola a pale radiali in materiale plastico.
- Copriventola: in lamiera stampata consente ottima canalizzazione del flusso e protezione alla ventola.
- Rotore: del tipo a gabbia di scoiattolo, equilibrato dinamicamente.
- Carcassa: lega di alluminio di elevata resistenza.
- Avvolgimento: isolamento termico di classe F.
- Protezione: IP55
- Temperatura ambiente: -20 °C ÷ +40 °C

- Cooling: by the means of fan with plastic radial blades.*
- Fan cover: sheet metal, for high performance air flux driving, and fan protection.*
- Rotor: squirrel cage type. Dynamically balanced.*
- Body: aluminium alloy with high mechanical strength.*
- Windings: class F thermal insulation.*
- IP55 protection degree*
- Ambient temperature: -20 °C ÷ +40 °C*

Protezione termica bimetallica (PTO) - solo IE2 e IE3

La serie T2A/T3A (IE2 e IE3) è dotata di pastiglia termica bimetallica (PTO) per il monitoraggio del superamento della soglia termica ($135^\circ\text{C} \pm 5^\circ\text{C}$). Utile per applicazioni che possono raggiungere temperature elevate. Sotto alcuni esempi dell'utilizzo.

La pastiglia termica in dotazione standard è un contatto normalmente chiuso: si apre al superamento della temperatura di soglia.

La protezione termica PTO (Power Take Off), è un contatto bimetallico, cioè composto da 2 metalli, abbracciati da una molla. La diversa dilatazione termica induce lo scostamento dei due metalli al superamento della soglia di intervento. La lettura del segnale è un semplice chiuso-aperto.

Esso può essere letto da un PLC, oppure portato all'ingresso di un terminale di un convertitore di frequenza. Solitamente la PTO viene gestita attraverso un telerutture: utilizzata per interrompere l'alimentazione di un telerutture che, a sua volta, interrompe l'alimentazione del motore.

Attenzione: il riammoto è automatico a circa $90-95^\circ\text{C}$. Si consiglia fortemente l'installazione da parte di personale esperto, in grado di mettere in opera un circuito con autoritenuta (o similare) che impedisca l'automatica ripartenza del motore alla richiusura della PTO.

Thermal bimetallic protector (PTO) – IE2 and IE3 only

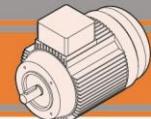

T2A/T3A series (IE2 and IE3) is provided with standard bimetallic thermal protector (PTO) monitoring overtemperature ($135^\circ\text{C} \pm 5^\circ\text{C}$). Suggested in high temperature motor applications. Below some examples.

Standard built in thermal protector is a normally closed contact. It opens over temperature threshold.

The PTO (Power Take Off) thermal protection is a bimetallic contact, i.e. composed of 2 metals, embraced by a spring. The different thermal expansion causes the two metals to move apart when the intervention threshold is exceeded. The signal reading is a simple closed-open.

It can be read by a PLC, or brought to the input of a terminal of a frequency converter. Usually the PTO is managed through a contactor: used to interrupt the power supply of a contactor which, in turn, interrupts the power supply to the motor.

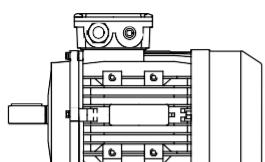

Warning: the reset is automatic at about $90-95^\circ\text{C}$. It is strongly recommended that installation is carried out by expert personnel, capable of implementing a self-retaining circuit (or similar) that prevents the automatic restart of the motor when the PTO closes.

Grado di protezione IP

IP enclosures protection indexes

Indica il grado di isolamento meccanico del corpo motore.
1° cifra protezione alla penetrazione di corpi solidi.
2° cifra protezione contro la penetrazione d'acqua.

Indicates the degree of mechanical insulation of the motor body.
1st figure indicating level of protection against the penetration of solid bodies.
2nd figure: indicating degree to which the motor is waterproof.

IP		Definizione / Description	IP		Definizione / Description
0		Non protetto / No protection	0		Non protetto / No protection
1		Protetto da corpi solidi superiori a Ø 50 mm. <i>Protected against solid matters (over Ø 50 mm)</i>	1		Protetto contro la caduta verticale di gocce d'acqua. <i>Protected against drops of water falling vertically</i>
2		Protetto da corpi solidi superiori a Ø 12 mm. <i>Protected against solid matters (over Ø 12 mm)</i>	2		Protetto contro la caduta verticale di gocce d'acqua con inclinazione max di 15° <i>Protected against drops of water falling up to 15°</i>
3		Protetto da corpi solidi superiori a Ø 2.5 mm. <i>Protected against solid matters (over Ø 2.5 mm)</i>	3		Protetto contro la pioggia. <i>Rain proof fixture</i>
4		Protetto da corpi solidi superiori a Ø1 mm. <i>Protected against solid matters (over Ø1 mm)</i>	4		Protetto contro gli spruzzi. <i>Splash proof fixture</i>
5		Protetto contro la polvere <i>Dust proof</i>	5		Protetto contro getti d'acqua <i>Water jet proof</i>
6		Totalmente protetto contro la polvere <i>Fully dust proof</i>	6		Protetto dalle ondate <i>Wave proof</i>
7		N.A.	7		Protetto contro immersione <i>Watertight immersion fixture.</i>
8		N.A.	8		Protetto contro immersione/sommersione prolungata <i>Watertight immersion fixture for a long time.</i>

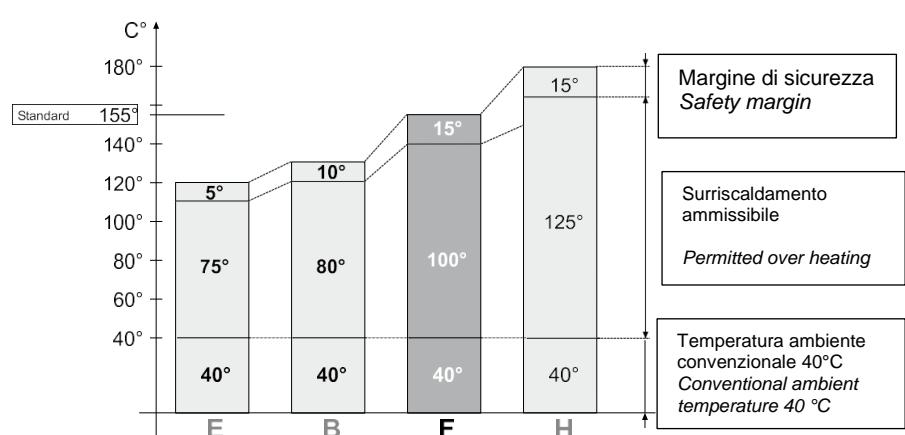

Classe di isolamento termico

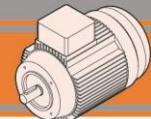

Insulation class

La classe termica indica il grado di resistenza alla temperatura interna, nel punto più caldo (avvolgimenti). Maggiore il carico e migliore deve essere il livello di protezione.
Attiene alle resine e in generale a tutti i materiali interni di isolamento

Thermal insulation class is the level of thermal protection, measured inside the motor, in the hottest point (windings). Bigger load and better the level of thermal insulation required.
Related to resin and all the internal insulation materials.

Classe Class	Massima temperatura interna Max. windings temp.
E	120°C
B	130°C
F	155°C
H	180°C

Tipi di servizio IEC

IEC duty services

Il servizio di un motore indica il tipo di utilizzo e la gravosità del ciclo di lavoro. Lo stesso motore può funzionare in tutti i servizi, purché si moduli la potenza nominale al fine di consentire il corretto equilibrio termico.

Lo stesso motore è dichiarato per potenze diverse se è diverso il servizio.

Motor service describes kind of work and cycle of running. The same motor works under all services but adjusting the rated power in order to have the right temperature balance. About the same motor, different rated powers against different services

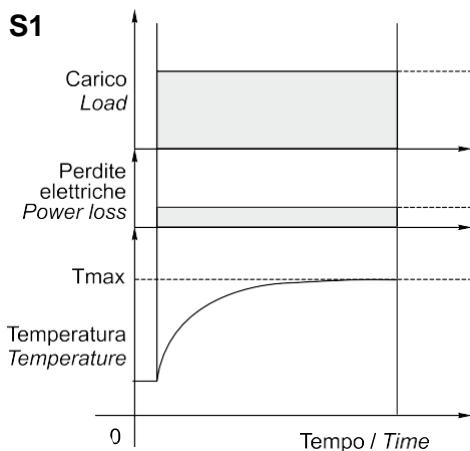

S1	Servizio continuo. Funzionamento a carico costante per una durata sufficiente al raggiungimento dell'equilibrio termico.	Continuous duty. The motor works at a constant load for enough time to reach temperature equilibrium
S2	Servizio di durata limitata. Funzionamento a carico costante per una durata inferiore a quella necessaria al raggiungimento dell'equilibrio termico, seguito da un periodo di riposo tale da riportare il motore alla temperatura ambiente.	Short time duty. The motor works at a constant load, but not long enough to reach temperature equilibrium, and the rest periods are long enough for the motor to reach ambient temperature.
S3	Servizio periodico intermittente. Sequenze di cicli identici di marcia e di riposo a carico costante, senza raggiungimento dell'equilibrio termico. La corrente di punta ha effetti trascurabili sul surriscaldamento del motore.	Intermittent periodic duty. Sequential, identical run and rest cycles at constant load. Temperature equilibrium is never reached. Starting current has little effect on temperature rise.
S4	Servizio periodico intermittente con avviamento. Sequenza di cicli di funzionamento identici di avviamento, marcia e riposo a carico costante, senza raggiungimento dell'equilibrio termico. La corrente di punta ha effetti sul riscaldamento del motore.	Intermittent periodic duty with starting. Sequential identical start, run and rest cycles with constant load. Temperature equilibrium is not reached, but starting current affects temperature rise.
S5	Servizio periodico intermittente con frenatura elettrica. Sequenza di cicli di funzionamento identici di avviamento, marcia a carico costante, frenatura elettrica e riposo, senza raggiungimento dell'equilibrio termico.	Intermittent periodic duty with electric braking. Sequential, identical cycles of starting, running at constant load, electric braking and rest. Temperature equilibrium is not reached.
S6	Servizio periodico ininterrotto con carico intermittente. Sequenza di cicli di lavoro identici con carico costante e senza carico. Non ci sono periodi di riposo.	Continuous operation with intermittent load. Sequential, identical cycles of running with constant load and running with no load. No rest periods.
S7	Servizio periodico ininterrotto con frenatura elettrica. Sequenza di cicli di funzionamento identici di avviamento, marcia a carico costante e frenatura elettrica, senza periodi di riposo.	Continuous operation with electric braking. Sequential, identical cycles of starting, running at constant load and electric braking. No rest periods.
S8	Servizio periodico ininterrotto con variazioni di carico e di velocità. Sequenza di cicli identici di avviamento, marcia a carico costante e velocità definita, seguiti da marcia a carico costante differente e velocità differente dalla precedente. Non ci sono periodi di riposo.	Continuous operation with periodic changes in load and speed. Sequential, identical, duty cycles of start, run at constant load and given speed, then run at other constant loads and speeds. No rest periods.
S9	Servizio con variazioni di carico e velocità non periodiche	Load and speed non periodic variations

Grafico servizi più comuni

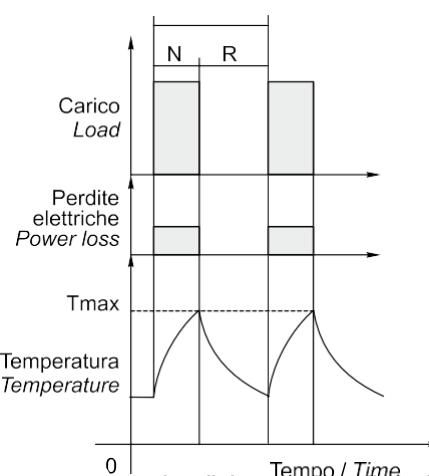

Most common services diagrams

N = funzionamento /run
S= riposo/rest

Durata di un ciclo/
Period

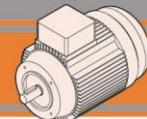

S2/S3

NOTA: Lo stesso motore può essere usato per cicli e servizi diversi, con l'unica limitazione che la temperatura interna non superi mai la Tmax stabilita dalla classe di isolamento termico del motore.

NOTE: The same motor can run under all duty services, limitation is due to internal temperature that must not override Tmax stated by motor thermal class.

Serie TS-T2A-T3A - Funzionamento in ambiente 60 Hz

Il motore 400 V 50 Hz può essere alimentato a 60 Hz con le seguenti conseguenze:

- La velocità aumenta del 20 % perché dipendente direttamente dalla frequenza.
- La coppia modifica in funzione della tensione (infatti il rapporto tensione/frequenza è proporzionale al flusso magnetico ammesso).

A 400 V la coppia cala di circa il 20% mentre la potenza rimane invariata.

A 480 V la coppia rimane invariata e la potenza aumenta del 20% circa.

Valori intermedi di tensione producono effetti intermedi.

Series TS-T2A-T3A - 60 Hz line power supply

A 400 V 50 Hz motor can run under 60 Hz line but following modifications:

- Speed increases 20% because following directly the frequency.
- Torque varies depending on voltage (because ratio Volt/herz is proportional to available magnetic flux).

400 Vac torque decreases about 20% but power still remains the same.

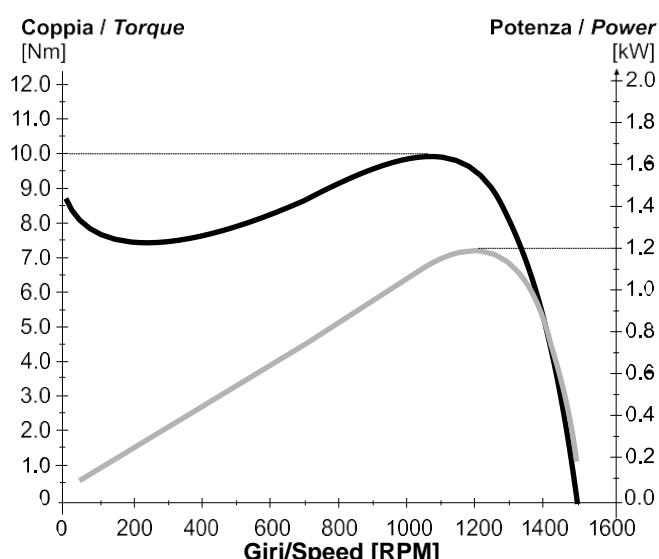

480 Vac torque is still the same and power increases 20%. Mean voltage gives mean results.

	50 Hz	60 Hz
400 V	Standard	Velocità / speed ≈ + 20% Coppia / torque ≈ -20% Potenza / power ≈ invariata / the same
480 V	Velocità / speed ≈ invariata / the same Coppia / torque - potenza / power ≈ +20% Attenzione, perdite e surriscaldamento <i>Take care loss and overheating</i>	Velocità / speed ≈ + 20% Coppia / torque ≈ invariata / the same Potenza / power ≈ + 20%

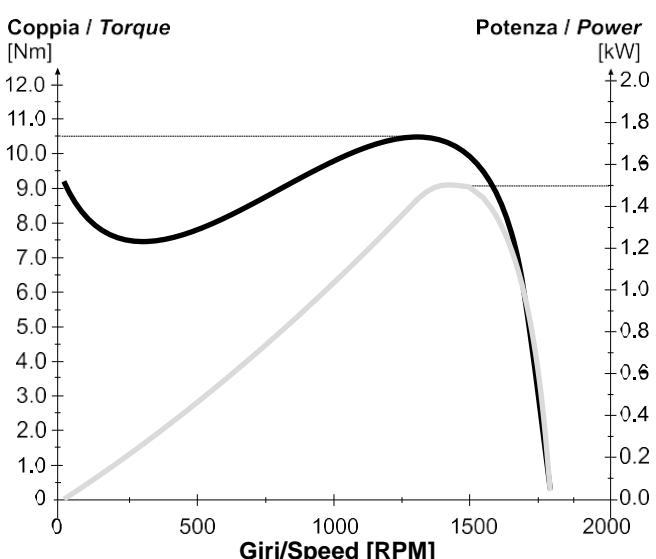

In realtà fenomeni quali la saturazione del flusso magnetico nel ferro, perdite per rotolamento, non linearità, ecc, modificano l'efficienza complessiva e il fattore di potenza ($\cos\phi_{HI}$) e si possono ottenere scostamenti del dato teorico che quindi è da intendersi come indicazione. Per valori precisi, si prega di contattare Transtecno s.r.l.

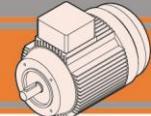

In practice, iron saturation of magnetic flux, volving losses, non linearity phenomena, etc, vary the global efficiency and power factor ($\cos\phi_{HI}$) with shifting from theoretical data (which are to be intended just as an indication). Pls, contact Transtecno s.r.l. for more exact data.

Grafico motore TS 8024 nelle 2 configurazioni 400 V 50 Hz / 480 V 60 Hz

Motor TS 8024 performance diagram, both configurations 400 V 50 Hz / 480 V 60 Hz

La convenzione di Kyoto da molti anni ha posto l'attenzione sulla grave situazione del riscaldamento globale causato dall'emissione di grandi quantità di gas serra. Unitamente alla necessità di reperire nuove fonti di approvvigionamento energetico, la commissione europea impose l'adozione di misure concrete per il risparmio energetico e per la progettazione ecocompatibile a partire dal 2011. Dato il considerevole uso di motori elettrici CA nell'industria mondiale, furono introdotte norme più rigide nella Comunità Europea. In particolare miranti ad aumentare l'efficienza dei motori, classificati in classi crescenti da IE1, IE2, IE3, IE4 e così via. L'efficienza è la misura espressa in percentuale dell'efficacia di un motore di convertire energia elettrica in meccanica, quindi aumentare l'efficienza significa ottenere lo stesso lavoro a minor consumo energetico. Con benefici per l'economia e l'ambiente.

Dal giugno del 2011 ad oggi si sono susseguiti regolamenti sempre più mirati ed incisivi, tutti rivolti allo stesso scopo: riprogettare i motori elettrici, migliorando l'efficienza secondo livelli stabiliti per legge, con la finalità di ridurre il consumo elettrico, limitare le emissioni nocive e liberare risorse per lo sviluppo industriale. Transtecno è da tempo sensibile a questo tema e introduce nella propria gamma motori ad efficienza superiore, IE2 e IE3 accanto ai motori tradizionali.

Più in dettaglio l'attuale regolamento, il REGOLAMENTO (CE) N. 1781/2019 DELLA COMMISSIONE Europea (e aggiornamenti) del 1 ottobre 2019 stabilisce che: un motore elettrico a induzione a gabbia di scoiattolo, mono velocità e trifase, con una frequenza di 50 Hz o 50-60 Hz che abbia: da 2 a 8 poli, una tensione nominale massima di 1000V, una potenza nominale compresa tra 0,75 kW e 1000 kW, caratteristiche basate su un funzionamento in continuo, deve avere i seguenti livelli di efficienza.

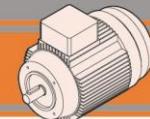

The Kyoto Convention has for many years focused attention on the serious situation of global warming caused by the emission of large quantities of greenhouse gases. Together with the need to find new sources of energy supply, the European Commission imposed the adoption of concrete measures for energy saving and eco-design starting from year 2011. Because of the considerable use of AC electric motors in world industry, more stringent standards were introduced in the European Community. In particular, aimed at increasing the efficiency of motors, classified in increasing classes from IE1, IE2, IE3, IE4 and so on. Efficiency is the measure expressed as a percentage of the effectiveness of a motor to convert electrical energy into mechanical energy, so increasing efficiency means obtaining the same work with less energy consumption. With benefits for the economy and the environment.

Since June 2011, increasingly targeted and incisive regulations have followed one another, all aimed at the same goal: redesigning electric motors, improving efficiency according to levels established by law, with the aim of reducing electricity consumption, limiting harmful emissions and freeing up resources for industrial development. Transtecno has long been sensitive to this issue and is introducing higher efficiency motors, IE2 and IE3, alongside traditional motors, into its range.

More specifically, the current regulation, REGULATION (EC) No. 1781/2019 OF THE EUROPEAN COMMISSION (and updates) of 1 October 2019 establishes that: a single-speed, 3-phase squirrel-cage induction electric motor, with a frequency of 50 Hz or 50-60 Hz that has: from 2 to 8 poles, a maximum nominal voltage of 1000V, a nominal power between 0.75 kW and 1000 kW, characteristics based on continuous operation, must have the following efficiency levels.

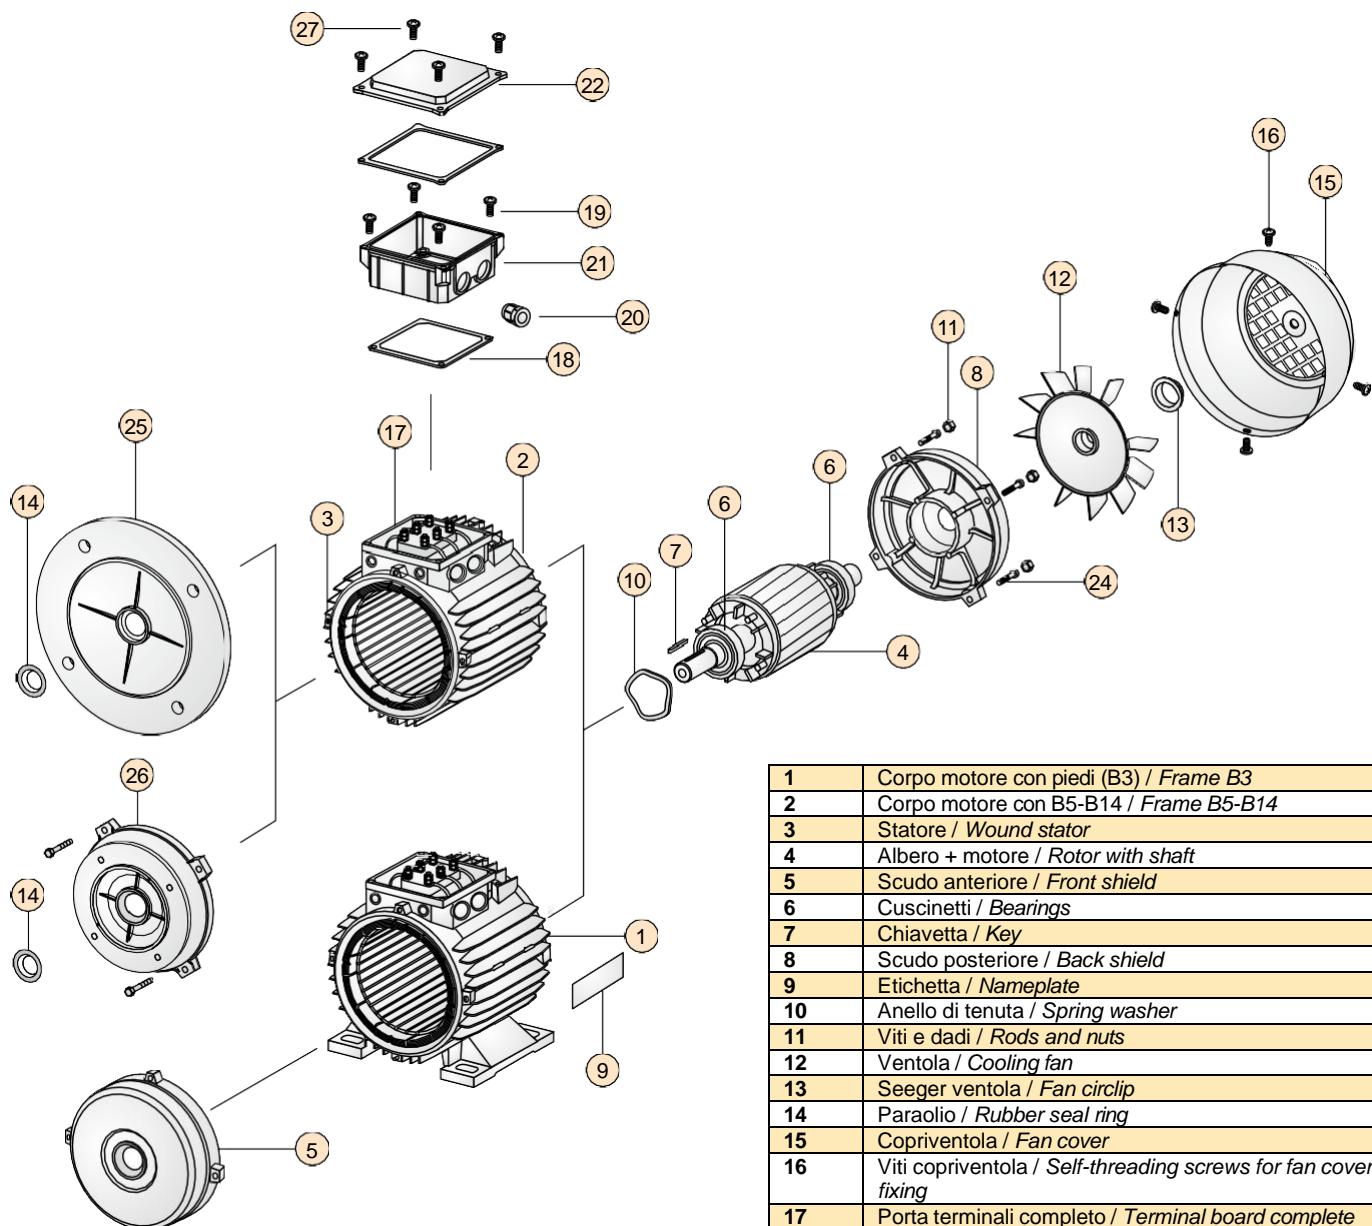

Motore Motor	2 - 4 - 6 - 8 poli / poles < 1000 V 50, 60, 50/60 Hz 0.12 kW ≤ Motor < 0.75 kW S1 IE2 0.75 kW ≤ Motor < 75 kW S1 IE3 75 kW ≤ Motor ≤ 1000 kW S1 IE4
